Livestock

Corn steep water

Corn steep water
is produced during the extraction of starch from corn. It is the liquid fraction in which the maize kernels have been soaked and therefore contains the soluble parts of the maize kernel. The fraction is evaporated and increased to 40 to 50 percent dry matter. The product can be used as a feed ingredient or as part of corn gluten feed. Corn steep water contains high levels of phosphorus, sodium and potassium, hence the limited inclusion in the ration.

Kwaliteit
The product complies with laws and regulations. Mycotoxins, insecticides, pesticides and herbicides are tested according to the GMP+ FSA. The product is non-GMO (according to Regulation (EC) 1829/2003 and 1830/2003).

Valid from 25 February 2025

Levels are based on averages and stated in grams per kg of dry matter, unless stated otherwise. Changes in product composition are reserved.

Feeding advice based on DS of total ration

Logistics & Storage

Transport	Liquid with tank truck
Storage	In an acid-resistant silo or bunker with agitator, regular stirring is desirable to prevent settling.
Shelf life	2 months, provided the silo or bunker is cleaned regularly
Nipple worthy	Yes
